If we simply run as Java Application then it will use default profile (dev) which we setup in pom.xml as default active profile

----

Let's build and run for other profile

Make setup in "Run Configuration" Window ..

left   Or   right
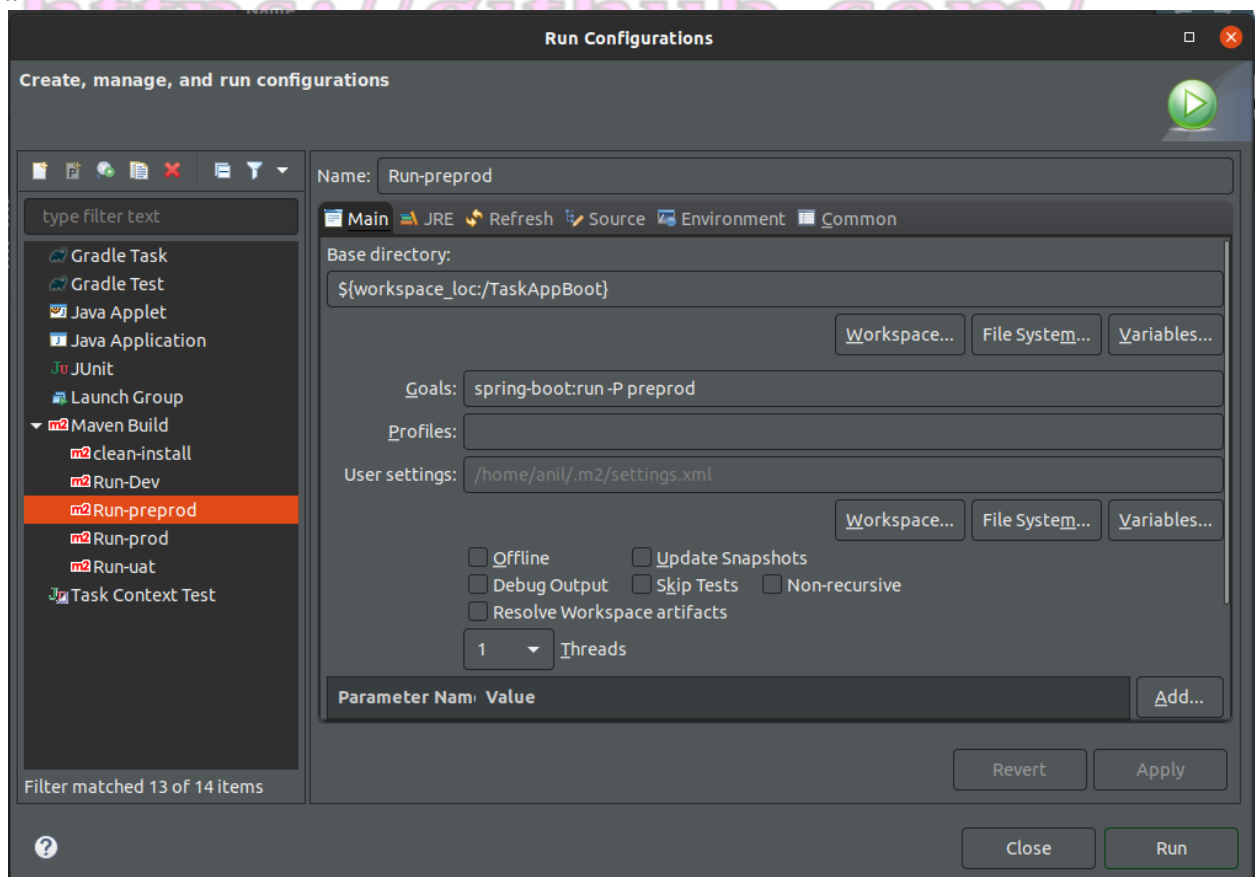

Setup for build(clean & install) with profile
Uat but not run here

|

Setup for dev profile "RUN"

Steup for preprod profile Run (below log confirming which profile running)

ll

Steup for uat profile Run

Steup for prod profile Run
